

6m³ FEL Bin Dimensions

This bin is ideal for light-weight compactable waste which is collected by a Front End Loader truck.

This bin is built using 3mm mild steel for the structure and 4.5mm plate for side pockets. The bin can be fitted with plastic lids which minimizes wind pollution from the waste being blown out of the bin.

On request, we can build smaller bins in the sizes of a 4m³ and 2m³ containers.
